

## Performance

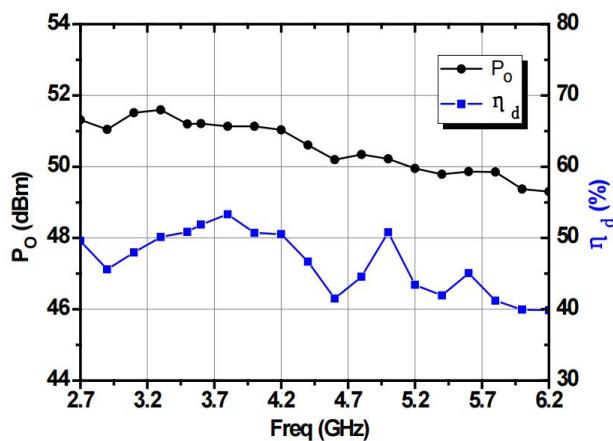

- Technology: 0.25um Power GaN HEMT
- Frequency: 2.7~6.2GHz
- Typical Pout : 51dBm(3ms,50%)
- Typical Gain: 8dB
- Typical PAE:  $\geq 40\%$
- Bias: 28V@1A
- Package: MoCu Carrier(22.6\*17.6\*2mm)

**Electrical Specifications (TA=25°C, Vd=28V, Idq=1A, F: 2.7~6.2GHz, Pin=43dBm, PL=3ms, D.C=50%)**

**Note:**

- (1) The typical packaging form is a molybdenum copper carrier, which can change the feeding position and provide a shell package according to customer needs;
- (2) Please strictly follow the sequence of applying negative power first and then positive power. When removing power, first decrease the leakage voltage and then decrease the gate voltage;
- (3) Connect the circuit according to the diagram, pay attention to anti-static, and ensure good grounding and heat dissipation when using power devices;
- (4) This product is an electrostatic sensitive device, which requires attention to electrostatic protection during storage and use, and requires good grounding during use;
- (5) The input standing wave ratio is high, and the input terminal needs to adopt radio frequency isolation measures..
